Introduction

Coronavirus is a family of viruses which threatens the health of most people around the world. The coronavirus' crown-like spikes give the virus family its name. The first case of novel coronavirus, also known as SARS-CoV-2, was reported in Wuhan, China at the beginning of December 2019. This project aims to exploring COVID-19 deaths that happened in 2020-2021 through data analysis and projections.

Dataset

A dataset is a series of data files that contain country , region , covid-19 deaths , non-covid19 deaths , start_date , population, expected deaths , excess_deaths , year . Data was collected during 2020-2021. The form includes 11715 rows and 15 columns.

Findings

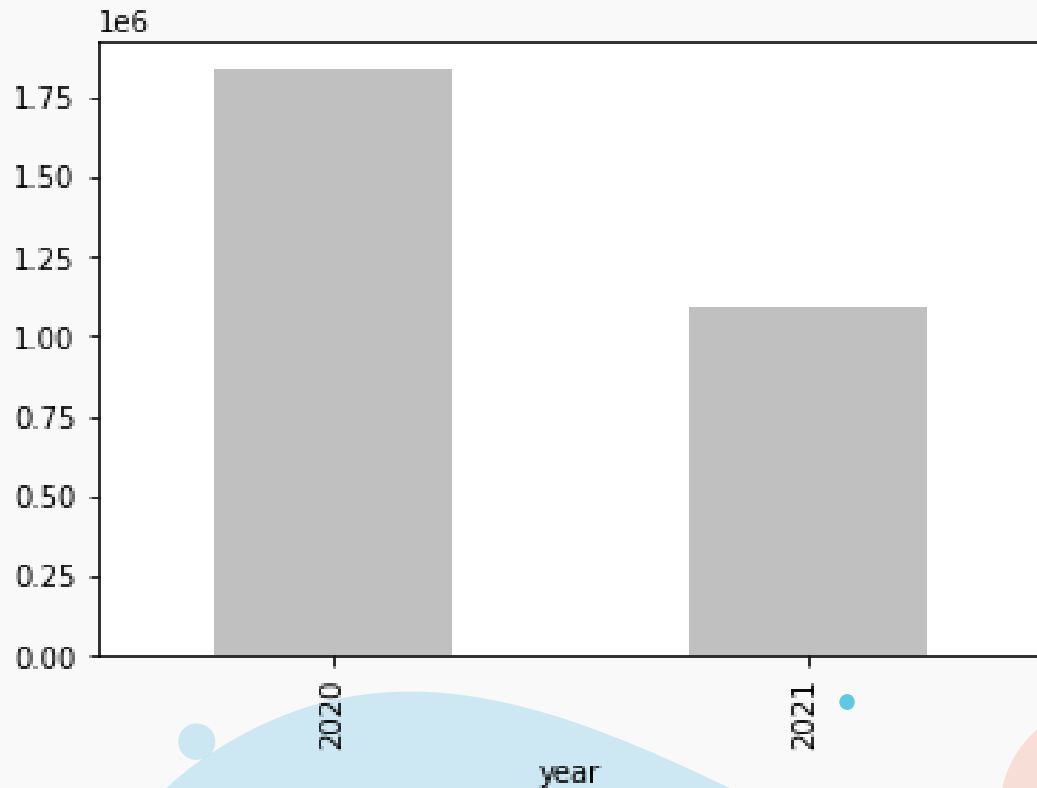

What are the highest 5 countries have COVID-19 deaths number in 2020-2021?

- What are the lowest 5 countries have COVID-19 deaths number in 2020-2021?

In which year did covid-19 deaths rise up?

What are the percentage of covid-19 deaths and non- covid-19 deaths in 2020- 2021?

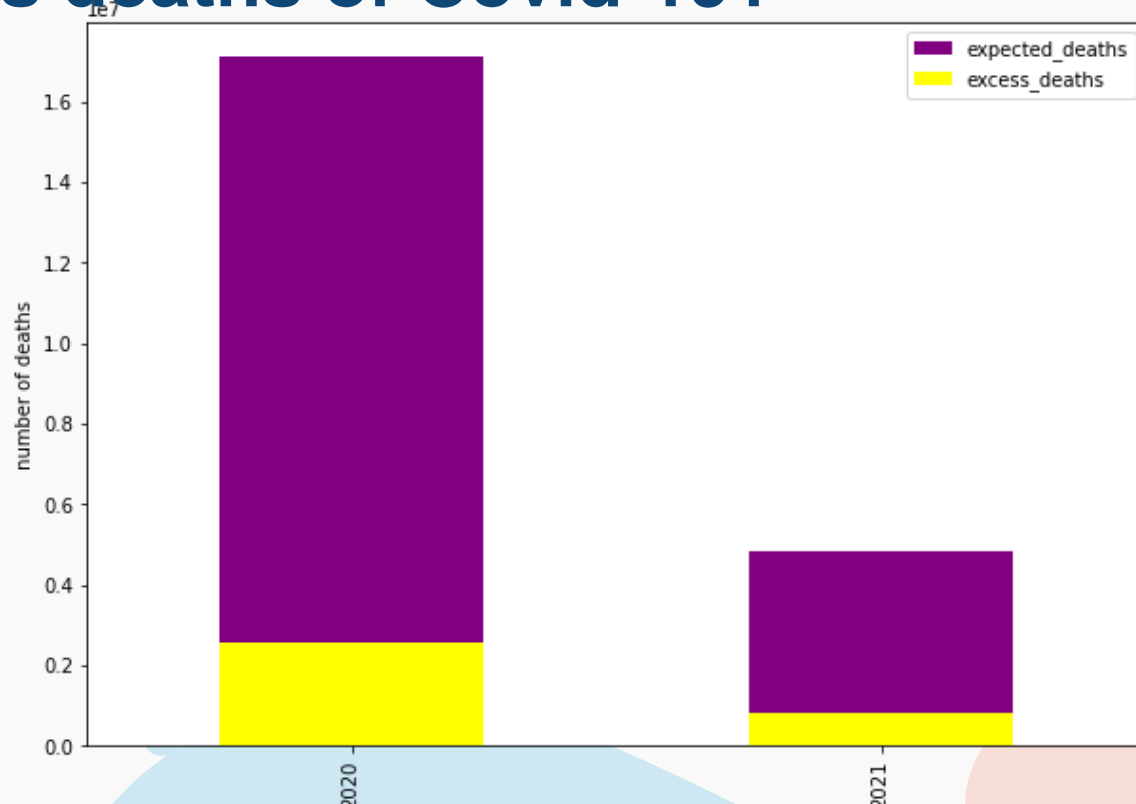

covid_deaths-in-2020

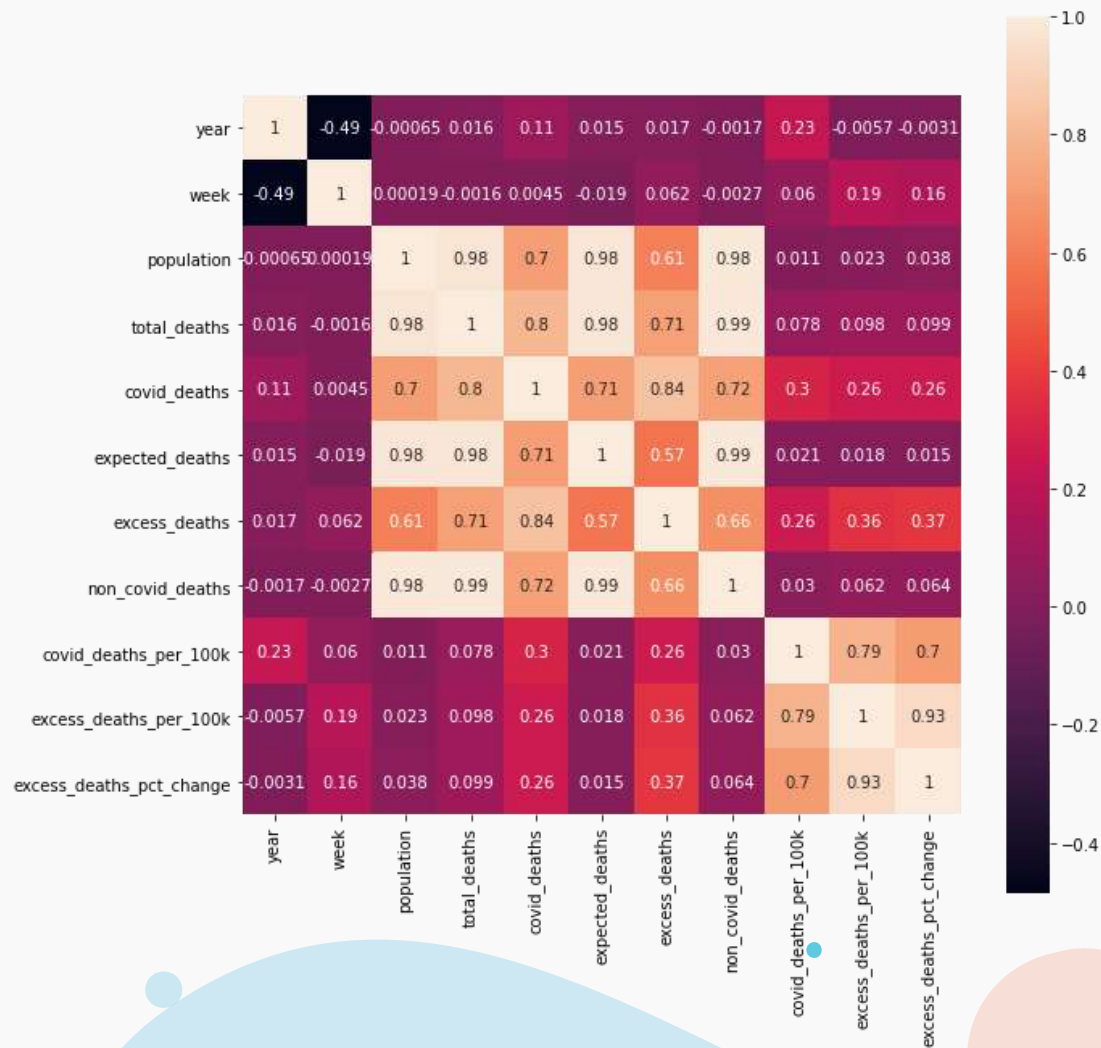

non_covid_deaths-in2020

compare between expected deaths and excess deaths of Covid-19?

THANKS!
